

WHY BYERS MAP VIEWER™?

Give everyone easy access to mapping and facilities data

As your mapping database grows, more people throughout your organization will need access to this information. To help you leverage your investment in your AM/FM/GIS system, Byers Map Viewer provides inexperienced or occasional users immediate access to mapping and facility information.

- **Eliminate wasted time searching for maps.** The digital map will display long before you would ever find it manually.
- **Use information you already know,** such as telephone number, address, street name, etc. Map Viewer finds and displays the correct maps—no more guessing which ones to pull.
- **Find specific text or features.** Getting the right map is only half the battle. Map Viewer saves you even more time by finding exactly what you're looking for.
- **Access the most current maps.** You'll always have access to the latest version of a map, which means you'll always be up-to-date on changes.
- **See what you need all on a single "seamless" image.** You don't have to piece together corners and edges of separate maps to see an area.
- **Cut reproduction and paper costs immediately.** Take your maps to the field, on portable computers. With Map Viewer, there's little need for cumbersome paper maps or microfilm anymore.
- **Review and redline maps efficiently.** You can use your company standard symbols and drawing conventions to markup maps. Redlines made in Map Viewer won't get lost or misinterpreted because they can be easily transferred to your mapping database.
- **Eliminate lost maps.** You won't have to deal with misfiled or missing maps when you need them most.
