St. Vincent's Hospital

Curtis James, President and CEO

"I think in a healthcare environment today you need to be able to provide information anytime, anywhere to the physicians, the clinicians and the caregivers. The only way I know how to do that is in a wireless environment."

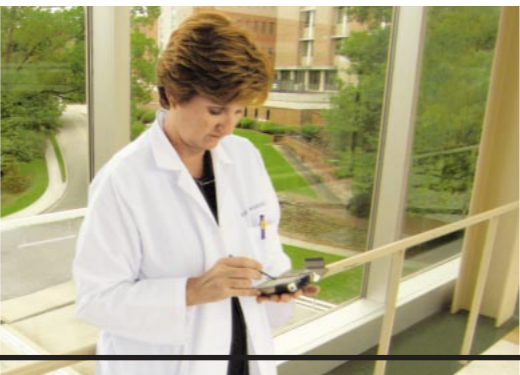

Wireless LAN. It's the non-invasive solution that delivers data for higher-quality care.

BellSouth designed and implemented a Wireless LAN for St. Vincent's Hospital in Birmingham that extends their clinical data repository literally into the hands of the doctors and staff.

BellSouth puts patient histories, lab results and admission records in your hand.

Imagine caregivers having access to patient data right at the bedside. When handwritten orders are no longer misinterpreted. When lab results are available to physicians the instant the tests are completed. Your organization can gain these process improvements today with BellSouth® Wireless LAN Solutions.

We call it a competitive advantage. You might just call it a medical breakthrough.

BellSouth AnswersSM for Healthcare

>> Just better connections.

BellSouth. Delivering smart solutions. (And now lunch, too.)

SCHEDULE A FREE LUNCH & LEARN TODAY.

Let's discuss your needs and see what a Wireless LAN can do for you. The BellSouth engineering team will bring lunch and a listening ear. Just bring your appetite and a complete To-Do list.

Thinking Wireless LAN? We'll bring lunch.

Listening. Answering.

St. Vincent's Hospital

Tim Stethelmen, CIO

"Information technology is strategic. Information infrastructure is critical. Wireless technology is an increasingly important component of any information infrastructure."

St. Vincent's Hospital

Bruce Brown, M.D.

"With wireless, I can do all of the chart investigation at the patient's bedside and that's what patients feel is the quality time spent with the doctor...I've seen that as the major improvement with wireless technology."

Learn how St. Vincent's Hospital uses wireless data access for improved performance.
